The Corduroy Unit is an eight-fluted exposed aggregate face unit with 7/8" deep grooves, which can be employed in an unbroken wall surface to provide style and interest. The recessed vertical grooves and textured face provide additional visual drama with changing light.

Exceptional acoustical relief is inherent in this design, making it an ideal block for various applications such as auditorium interiors and highway sound barrier walls.

This masonry unit is available in a variety of integral colors and includes additive for efflorescence control.
