

# FPS-5228

Standard Fireplace

## FREMONT

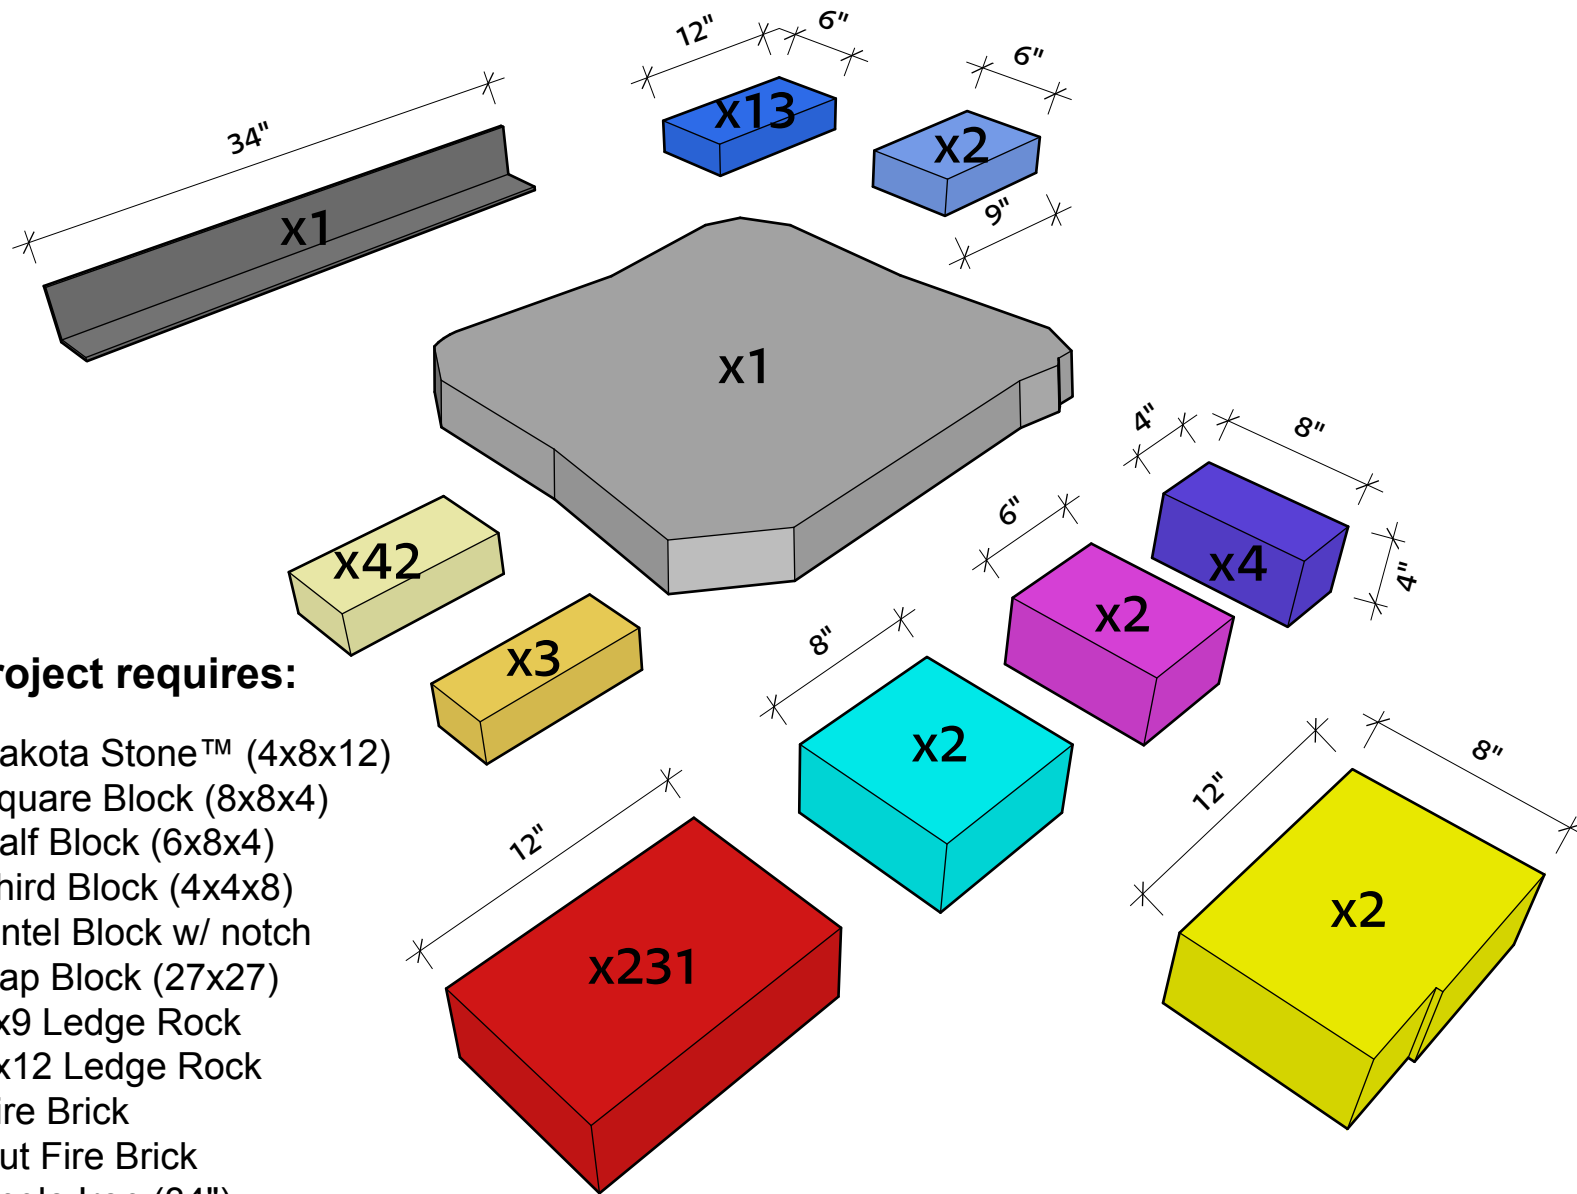

Shown with optional wood storage boxes which are not included.

Dakota Stone™

Step by step instructions for assembling FPS-5228 on a prepared surface/base.

**BUILD WITH  
DAKOTA**

**This project requires:**

- 231 Dakota Stone™ (4x8x12)
- 2 Square Block (8x8x4)
- 2 Half Block (6x8x4)
- 4 Third Block (4x4x8)
- 2 Lintel Block w/ notch
- 1 Cap Block (27x27)
- 2 6x9 Ledge Rock
- 13 6x12 Ledge Rock
- 42 Fire Brick
- 3 Cut Fire Brick
- 1 Angle Iron (34")
- 9 Tubes Adhesive

All sizes in this document are approximate.

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

**Tools  
needed**

All sizes in this document are approximate.

The "Square Foot Unit." consists of three block as shown. By rotating this unit (SFU) we are able to build quickly and easily while keeping bond lines broken up. These will always be shown in a tan color.

Sometimes SFUs are broken up or can't be used. The Double Unit is the next preferred unit. Double Units are grouped for strength and speed in construction. They are always represented in green.

The Single Unit is the basis for all the construction, of course. When used in a single or non-standard configuration, you will see Dakota Stone™ depicted in red.

Long Halves are simply made by cutting a block along its center on the longest axis.

Cutting four inches off the short end of a Dakota Stone will get you a Third block (and a Square one).

Cutting four inches off the short end of a Dakota Stone will get you a Square block (and a Third one).

## Unit Size Color Key

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

**KEY1**

All sizes in this document are approximate.

## Unit Size Color Key

12" x 12" Ledge Rock paver.  
Great to use as a large cap. Always shown in dark blue.

6" x 12" Ledge Rock paver.  
Great to use as a cap. Always shown in middle blue.

6" x 9" Ledge Rock paver.  
Great to use as a small cap. Always shown in light blue.

6" x 6" Ledge Rock paver.  
Great to use as a cap. Always shown in dark blue.

Lintel Block. There are two precision cut lintel block in your kit. They will be untumbled. "Age" the edges with a hammer before installing.

Fire brick. These hard refractory brick are very dense. Use them to line your firebox. Three come cut to a narrower width.

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

**Remove the crown blocks before you install the large cap block.**

Allow the adhesive to fully cure before proceeding to lay the cap on these supports.

After the adhesive is set, place the cap block up-side-down on the top of your four block. Since the stone will be viewed from the ground looking up, the decorative side of the cap should be facing the ground. You may need to add some sand or coins to keep the cap from rocking on the block.

**Placing the cap is the hardest part of the entire build. Use ladders and/or scaffolding. You can use the ledges created by the raked block as a "strairway" to move the block up until the final heave.**

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

Allow the fireplace to cure for 72 hours before building your first fire. Then follow the 30/60/90 rule. Build a fire that will put itself out in 30 minutes. After it cools, build one that extinguishes itself in sixty minutes. Finally, build a 90 min-ute fire. Congratulations! Your fireplace is ready for use.

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.
