WB2-3628
See-Thru Wood Boxes

SEE-THRU WOOD BOXES

Step by step instructions for assembling WB2-3628 on a prepared surface/base.
All sizes in this document are approximate.

This set of instructions assumes you are building on a level grade on a level foundation.

These are two sided See-Thru wood boxes. They are recommended for a See-Thru fireplace. They will fit any Romanstone fireplace, but for traditional fireplaces, we recommend the standard wood boxes.

Materials Needed:
- 76 Dakota Stone™ (4x8x12)
- 2 Long Halves (4x4x12)
- 2 Slabs 30" x 36"
- 4 Tubes Adhesive

Tools Needed:
- Dead Blow Hammer
- Caulk Gun
- 4 Foot Level
- Torpedo Level
- Square

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.
All sizes in this document are approximate.

**Unit Size Color Key**

- **Square Foot Unit:** The "Square Foot Unit." consists of three block as shown. By rotating this unit (SFU) we are able to build quickly and easily while keeping bond lines broken up. These will always be shown in a tan color.

- **Double Unit:** Sometimes SFUs are broken up or can't be used. The Double Unit is the next preferred unit. Double Units are grouped for strength and speed in construction. They are always represented in green.

- **Single Unit:** The Single Unit is the basis for all the construction, of course. When used in a single or non-standard configuration, you will see Dakota Stone™ depicted in red.

- **Long Half:** Long Halves are simply made by cutting a block along its center on the longest axis.

- **Third:** Cutting four inches off the short end of a Dakota Stone will get you a Third block (and a Square one).

- **Square:** Cutting four inches off the short end of a Dakota Stone will get you a Square block (and a Third one).

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

Lay out the first course of your kit. This is the "foundation" on which you will build your See-Thru Wood Boxes. Take time to make sure it is as perfect as possible. Be sure this course is level and square. Any mistakes made here will continue to show up as you build.
Remember: Just use a small bead of glue on each block. You don't want your blocks to "swim" due to too much glue. If some glue oozes out, DO NOT TRY TO CLEAN IT. You will only make a huge sticky mess. Wait for it to cure. Then, break or cut it away.
Remember: Just use a small bead of glue on each block. You don't want your blocks to "swim" due to too much glue. If some glue oozes out, DO NOT TRY TO CLEAN IT. You will only make a huge sticky mess. Wait for it to cure. Then, break or cut it away.
Before attempting to place these slabs, be sure that the adhesive on your boxes has fully cured. That way, they won't move out of place as you slide the top slab into position. Be sure to place the cut edge flush to your fireplace. Center the slab over your boxes. There will be a slight overhang on each side. All the exposed edges should be rock-faced. Use coins, sand, or shims as needed to level the slabs.

These Slabs are very heavy! Be sure to have plenty of help on hand. Always bend at your knees and wear gloves when handling these slabs.
