

Extend the Life of Your Hardscape Investment with Sealers from **SUREBOND**

After completing a new installation or restoration of a previously installed hardscape surface, the logical next step is to seal and protect the surface. A sealer can provide many benefits including easier maintenance, visual enhancement and protection of the surface. Unfortunately, the vast majority of hardscape installations are unsealed leaving the surface vulnerable to the wear and tear of every day use and the harsh elements. Be sure to protect the investment of a hardscape project with Surebond Sealers to keep it looking beautiful through the years.

Surebond Sealers Offer Protection Against:

- **Weather** - Sealed surfaces resist fading from harsh UV rays.
- **Water and Freeze/Thaw Conditions** - Sealed surfaces resist the damaging effects from water penetration.
- **Staining** - Sealed surfaces resist the intrusion of stains from food, minerals, nature, weather, dirt and de-icing salt.
- **Wear and Tear** - Sealed surfaces resist deterioration from the wear and tear of everyday use.
- **Moss, Mildew and Mold** - Surfaces protected with a sealer containing a fungicide will resist moss, mildew and mold growth.

Additional Benefits Surebond Sealers Offer:

- **Enhancement*** - Surebond Sealers with enhancing properties offer visual improvement by intensifying the color of the surface and/or adding a sheen.
- **Joint Stabilization*** - Surebond Joint Stabilizing Sealers harden the sand within the pavement joints reducing sand washout, inhibit weed growth and protect against insect infestation.
- **Easier Maintenance** - Sealed surfaces are easier to clean and maintain by keeping stains from penetrating the hardscape surface.

*Select Sealers

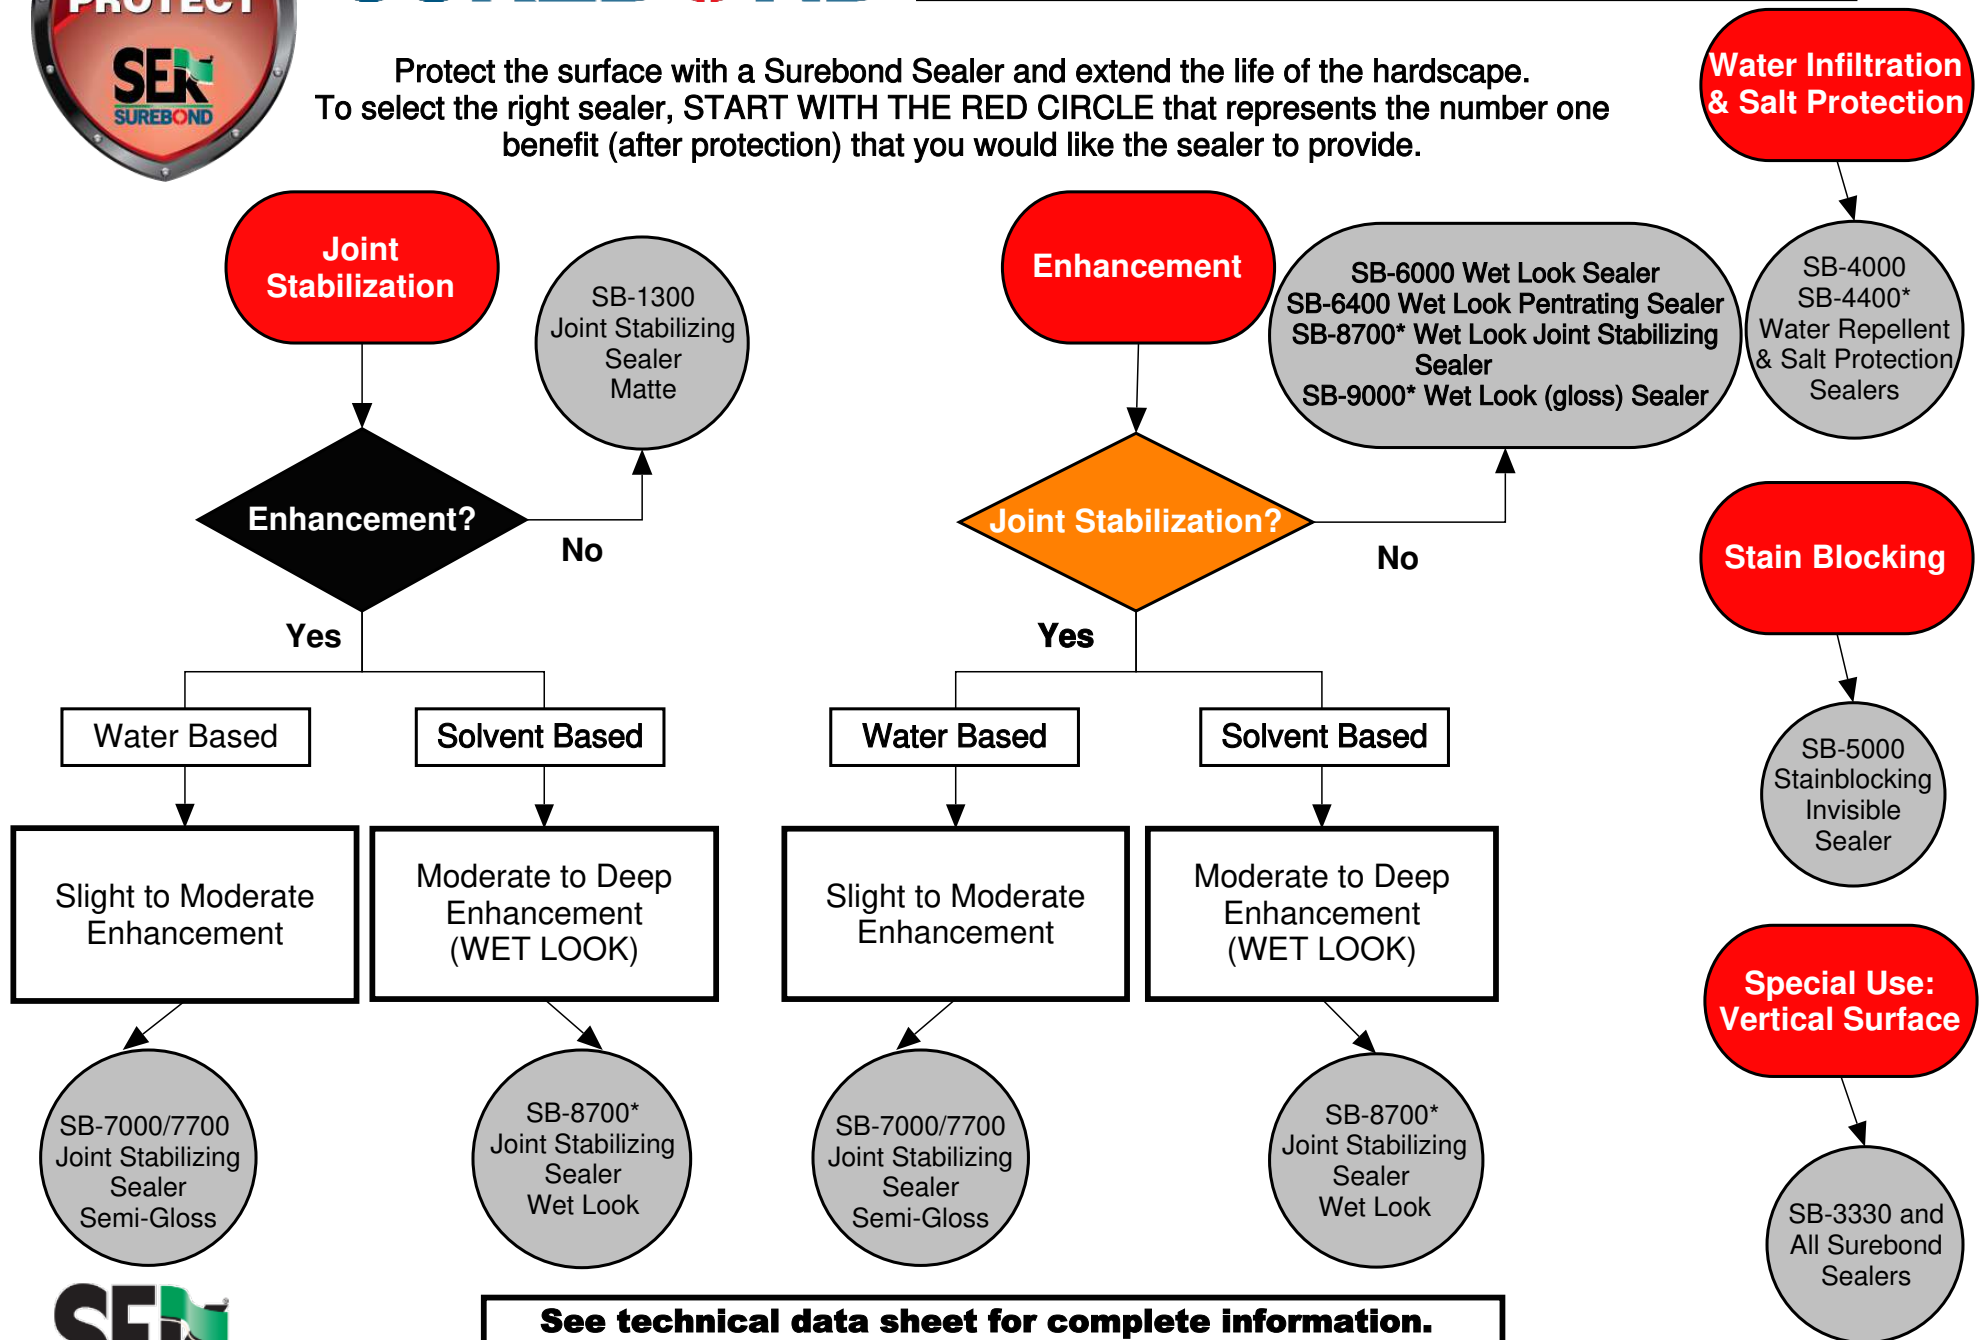

800-932-3343 | www.sek.us.com

To select the right sealer for you, refer to our Sealer Selection Guide or try our online Product Selection Tool: <http://sek.us.com/product-selection-tool/>

Protect the surface with a Surebond Sealer and extend the life of the hardscape. To select the right sealer, START WITH THE RED CIRCLE that represents the number one benefit (after protection) that you would like the sealer to provide.
